ASCO 2026-06-05	Quantifying the impact of protocol design on enrollment and dropout rates in breast cancer clinical trials.	RECRUITING
This breast cancer trial, currently recruiting, is testing the effects of protocol design on enrollment and dropout rates, and if successful, it could enhance patient retention and participation in future clinical studies.		
ASCO 2026-06-05	Contribution of clinical trials to improved clinical outcomes for patients with metastatic breast cancer (MBC).	RECRUITING
This recruiting trial for metastatic breast cancer is testing new treatment options, and if successful, it could lead to improved survival rates and quality of life for patients.		
BioSpace 2026-06-05	MAIA Biotechnology Reports Strong Enrollment and Dosing Momentum in Pivotal Phase 3 Non-Small Cell Lung Cancer Trial	PHASE3
The Phase 3 trial for non-small cell lung cancer is testing a new treatment, and if successful, it could significantly improve survival rates and quality of life for patients.		
BioSpace 2026-06-05	Onchilles Pharma Doses First Patient in Phase 1/2 Clinical Trial of N17350 for Advanced Solid Tumors	RECRUITING
The Phase 1/2 trial of N17350 for advanced solid tumors aims to evaluate its safety and efficacy, potentially offering a new treatment option for patients if successful.		

SOURCE & DATE	SIGNAL	TYPE
ASCO 2026-06-04	The gap: Recognizing the inequities in oncology research and clinical practice guidelines—An analysis of clinical guidelines in multiple myeloma. <i>This analysis highlights the inequities in clinical guidelines for multiple myeloma, emphasizing the need for more inclusive research to ensure all patients receive equitable treatment options and improved outcomes.</i>	GENERAL
BioSpace 2026-06-04	ADC Therapeutics nosedives on 27 deaths in confirmatory trial for lymphoma drug <i>The Phase 3 trial for ADC Therapeutics' lymphoma drug indicates that if successful, it could provide a new treatment option for patients, despite the concerning reports of 27 deaths during the trial.</i>	PHASE3
Reuters 2026-06-03	'It's still working': More are living with cancer as era of targeted drugs takes hold <i>This article highlights the impact of targeted therapies in cancer treatment, indicating that more patients with various cancer types are experiencing improved survival rates and quality of life as these innovative drugs become more widely available.</i>	GENERAL
BioSpace 2026-06-03	Legend soars on 'best-in-class,' 'best-in-disease' in vivo CAR T in early lymphoma study <i>This early-phase trial for lymphoma tests a novel in vivo CAR T therapy, and if successful, it could offer a more effective and safer treatment option for patients compared to existing therapies.</i>	RESULTS
ASCO 2026-06-02	Sacituzumab Govitecan With Pembrolizumab Extends Progression-Free Survival 2 for Some People With Metastatic Triple-Negative Breast Cancer <i>The Phase 3 trial of sacituzumab govitecan with pembrolizumab for metastatic triple-negative breast cancer may significantly extend progression-free survival for patients if successful.</i>	PHASE3
BioSpace 2026-06-02	Can-Fite Reports Positive Clinical Observation in Phase 2a Pancreatic Cancer Study and Highlights Namodenoson's RAS Signaling Inhibition Mechanism <i>The Phase 2a trial for pancreatic cancer is testing Namodenoson, and if successful, it could provide a new treatment option that inhibits RAS signaling, potentially improving patient outcomes.</i>	RECRUITING

SOURCE & DATE	SIGNAL	TYPE
BioSpace 2026-06-02	AIM ImmunoTech Completes Phase 2 DURIPANC Enrollment Milestone Ahead of Schedule, Advancing Ampligen Toward Critical Pancreatic Cancer Clinical Milestones <i>The Phase 2 DURIPANC trial is testing Ampligen for pancreatic cancer, and if successful, it could provide a new treatment option that improves survival rates for patients with this aggressive disease.</i>	RECRUITING
BioSpace 2026-06-02	Celcuity to Hold Conference Call to Discuss Results for the PIK3CA Mutant Cohort of the Phase 3 VIKTORIA-1 Clinical Trial of Gedatolisib Regimens in HR+/HER- Advanced Breast Cancer on June 2, 2026 <i>The Phase 3 VIKTORIA-1 trial is testing Gedatolisib regimens in HR+/HER2- advanced breast cancer, and if successful, it could provide a new treatment option for patients with PIK3CA mutations.</i>	PHASE3
Reuters 2026-06-01	Summit drops as concerns over older patients cloud cancer trial data <i>The trial for older patients with advanced lung cancer is in phase III, testing a new combination therapy, and if successful, it could significantly improve survival rates and quality of life for this demographic.</i>	RESULTS
Reuters 2026-06-01	Revolution's pancreatic cancer drug doubles survival, boosts quality of life <i>In a Phase 2 trial, Revolution's pancreatic cancer drug has doubled survival rates and improved quality of life, potentially offering patients a more effective treatment option for this aggressive cancer.</i>	RESULTS
BioSpace 2026-06-01	ASCO: Akeso's VEGF/PD-1 boosts lung cancer survival, relieving pressure on US partner Summit <i>In a Phase 2 trial, Akeso's VEGF/PD-1 combination therapy for lung cancer significantly improved survival rates, potentially offering patients a more effective treatment option if successful.</i>	RESULTS
BioSpace 2026-06-01	ASCO: Biopharma has pancreatic cancer 'surrounded' as Immuneering's drug adds 9 quality months <i>In a Phase 2 trial for pancreatic cancer, Immuneering's drug demonstrated the potential to extend patients' quality of life by an additional nine months if successful.</i>	RESULTS

SOURCE & DATE	SIGNAL	TYPE
BioSpace 2026-06-01	ASCO: Revolution poised to capture RAS space as pancreatic cancer dataset ‘derisks’ approval <i>This Phase II trial for pancreatic cancer tests a new RAS-targeted therapy, and if successful, it could lead to a significant advancement in treatment options for patients with this challenging disease.</i>	RESULTS
BioSpace 2026-06-01	MAIA Biotechnology Presents Trial in Progress Poster for Pivotal Phase 3 Clinical Trial of Novel Telomere Targeting Agent at 2026 Annual Meeting of American Society of Clinical Oncology <i>The Phase 3 trial of a novel telomere-targeting agent for cancer aims to improve treatment outcomes for patients with advanced malignancies, potentially leading to more effective therapies if successful.</i>	PHASE3
BioSpace 2026-06-01	Revolution Medicines Announces ASCO Plenary Presentation Highlighting Unprecedented Results from Pivotal Phase 3 RASolute 302 Clinical Trial of Daraxonrasib in Previously Treated Metastatic Pancreatic Cancer <i>The Phase 3 RASolute 302 trial of Daraxonrasib for previously treated metastatic pancreatic cancer could provide a new effective treatment option, significantly improving survival rates for patients facing this aggressive disease.</i>	PHASE3
BioSpace 2026-06-01	ROADS Phase 3 Clinical Trial Data Presented at ASCO26 Show GammaTile® Provides Superior Tumor Control Leading to Patients Living Longer Without Recurrence Compared to Standard of Care in Newly Diagnosed Operable Brain Metastases <i>The Phase 3 ROADS trial shows that GammaTile® significantly improves tumor control and extends survival without recurrence for patients with newly diagnosed operable brain metastases compared to standard care.</i>	PHASE3
ASCO 2026-05-31	Multi-Selective RAS(ON) Inhibitor Nearly Doubles Survival Time in People With Metastatic Pancreatic Cancer <i>This Phase 2 trial of a multi-selective RAS(ON) inhibitor for metastatic pancreatic cancer shows potential to nearly double survival time, offering hope for improved outcomes in a historically challenging disease.</i>	RESULTS

SOURCE & DATE	SIGNAL	TYPE						
ASCO 2026-05-31	Potential New Targeted Treatment Option for People With Localized High-Risk Prostate Cancer <i>This Phase II trial is testing a new targeted treatment for localized high-risk prostate cancer, and if successful, it could provide patients with a more effective therapy option, potentially improving survival rates and quality of life.</i>	GENERAL						
Reuters 2026-05-31	Akeso lung cancer drug helps patients live 15% longer than immunotherapy in China trial <i>In a Phase 3 trial for lung cancer, Akeso's drug demonstrated a 15% longer survival compared to immunotherapy, potentially offering patients a more effective treatment option and improved outcomes.</i>	RESULTS						
STAT News 2026-05-31	Ultra-low doses could bring costly cancer treatments to more patients in poorer countries <i>This trial on ultra-low doses of cancer treatments aims to make therapies more accessible for patients with various cancers in poorer countries, potentially improving survival rates and quality of life if successful.</i>	GENERAL
