3.66

TIGHTENING — HIGH

Index centered at 0; > +2 = tightening

Primary Driver: ENERGY COST PRESSURE

Freight: 10.90 (-3.54%)

WTI: 95.42 (9.73%)

Distillate: 3.86 (11.91%)

Dollar: 98.52 (0.46%)

VIX: 18.69 (-1.01%)

Executive Insight (AI-Constrained)

The dominant signal is energy cost pressure, indicated by rising WTI and distillate prices. There is a divergence between energy costs and freight, with freight showing a decline. The system structure reveals cost pressures from energy outpacing logistics capacity. Why it matters: This situation highlights the strain on logistics as rising energy costs challenge operational efficiency.
