

Colon & Colorectal Cancer — Funding Intelligence

Alert Window: Today · Generated: 2026-04-25 23:40:49

Funding Intelligence Brief

Current funding trends in colorectal cancer (CRC) research indicate a significant concentration of resources on specific biomarker targets, particularly KRAS and BRAF. Nonprofit organizations such as the Dana-Farber Cancer Institute and Fox Chase Cancer Center are increasingly allocating capital towards genomic testing and biomarker research, with Dana-Farber reporting a revenue of \$3.4 billion and a focus on clinical trials. On the commercial side, companies like Amgen and Mirati Therapeutics are heavily investing in KRAS-targeted therapies, with Sotorasib and Adagrasib expected to enter the market by 2026. The combined nonprofit and commercial investment in KRAS and BRAF is substantial, reflecting their critical roles in CRC pathology and treatment. This focus on these biomarkers suggests a strategic alignment in research and therapeutic development, potentially leading to more effective treatments for patients with specific genetic profiles. Despite the promising advancements in treatment, funding for screening and early detection remains disproportionately low compared to treatment research. Organizations like the American Society of Clinical Oncology (ASCO) and the Conquer Cancer Foundation are increasing their funding for oncology education and GI cancer grants, but the overall investment in early detection methods, such as liquid biopsies using circulating tumor DNA (ctDNA), is not commensurate with the clinical importance of early CRC diagnosis. The active clinical trial landscape, with 559 trials currently recruiting, shows a strong emphasis on treatment interventions rather than preventive measures, indicating a potential oversight in addressing the critical need for early detection strategies. Furthermore, areas such as ctDNA and its application in recurrence monitoring and surveillance appear underfunded relative to their clinical significance. While ctDNA is gaining traction in research, the funding allocated to its development and application in CRC does not reflect its potential to revolutionize early detection and monitoring. Organizations like the Cancer Research Institute, which focuses on immunotherapy, may not be prioritizing these critical biomarkers adequately. The single most significant funding gap identified in this dataset is the lack of investment in early detection methods.

Situation Summary

Nonprofits tracked: 13 organizations · \$4.6B total revenue

Commercial 8-K filings: 16 · 13 with direct CRC mention

Active / recruiting trials: 559

FDA-approved CRC drugs: 26

Screening vs Treatment Gap

Where nonprofit dollars actually go — early detection vs treatment research. Screening prevents most CRC deaths; this ratio shows whether funding reflects that priority. Broad cancer funders (ASCO, V Foundation) are noted where their CRC allocation is unspecified.

Capital allocation by mission area (clearly-categorized orgs only · mixed-mission orgs shown separately below)

⚠ Screening underfunded — only 1% of clearly categorized nonprofit revenue goes to early detection and prevention. Most CRC deaths are preventable with timely screening.

SCREENING / PREVENTION

Fight Colorectal Cancer — \$3.1M
Prevent Cancer Foundation — \$57.3M
Colon Cancer Coalition — \$2.0M
Colorectal Cancer Coalition — \$269K

RESEARCH / TREATMENT

Dana-Farber Cancer Institute — \$3.4B
Memorial Sloan Kettering Cancer Center — \$656.8M
American Society of Clinical Oncology (ASCO) (broad cancer funder — not CRC-specific) — \$174.3M
Fox Chase Cancer Center — \$174.2M
V Foundation for Cancer Research (broad cancer funder — not CRC-specific) — \$47.8M
Conquer Cancer Foundation (ASCO) (broad cancer funder — not CRC-specific) — \$39.1M
Cancer Research Institute (broad cancer funder — not CRC-specific) — \$32.3M

◆ MIXED MISSION — SCREENING + RESEARCH (NOT INCLUDED IN RATIO ABOVE)

These organizations have explicit missions spanning both screening/prevention and research/treatment — classifying them as one or the other would misrepresent their work.

Stand Up To Cancer — \$38.9M
Colorectal Cancer Alliance — \$20.7M

Biomarker Funding Signals

For each biomarker: FDA-approved drugs, active trials, recent research publications, and companies with active 8-K filings. Shows where investment is concentrated and where clinical need outpaces funding.

Drug Pipeline Investment

FDA-approved CRC drugs cross-referenced against recent SEC 8-K filings. Shows which approved therapies have companies actively reporting material events — a signal of ongoing commercial development and investment.

Sotorasib (Lumakras) **KRAS G12C**

KRAS G12C inhibitor

Active investment: Amgen (AMGN) · Mirati Therapeutics (MRTX)

Adagrasib (Krazati) **KRAS G12C**

KRAS G12C inhibitor

Active investment: Amgen (AMGN) · Mirati Therapeutics (MRTX)

Bevacizumab (Avastin)

Anti-VEGF

Active investment: Genentech (RHHBY)

Trial Sponsorship Signals

Active CRC trials cross-referenced against companies with recent SEC 8-K filings. Commercially backed trials have industry sponsors actively filing material events. Academic trials rely on grants and institutional funding.

Appendix — Data Sources & Methodology

Data Sources

IRS Form 990 via ProPublica Nonprofit Explorer — annual nonprofit filings, 12–18 month lag

SEC EDGAR 8-K filings — material commercial events, filed within 4 business days

ClinicalTrials.gov API v2 — active and recruiting CRC trials

FDA Drug@FDA + DailyMed — approved colorectal cancer drugs

PubMed RSS + Society feeds — biomarker testing research publications

Signal Labels

FUNDED — approved drug exists AND company actively filing 8-Ks on this target

ACTIVE — approved drug exists OR 3+ active trials, no current commercial 8-K signal

EMERGING — active trials or recent publications, no approved drug yet

▲ Increasing / ▼ Decreasing — nonprofit revenue change > 5% year-over-year

How Cross-References Work

Biomarker signals — keyword matching across drug biomarker fields, trial inclusion criteria, publication targets, and SEC filing descriptions

Drug investment — approved drug names and biomarkers matched against SEC 8-K headlines and summaries

Trial sponsorship — trial sponsor names matched against companies with recent SEC filings

Colon & Colorectal Cancer — Funding Intelligence

About This Report

This report is the financial intelligence layer of the CRC monitoring system, cross-referencing nonprofit capital flows, commercial SEC filings, active clinical trials, and FDA-approved drugs to identify where funding is concentrated and where gaps exist in the colorectal cancer research and treatment landscape.

Limitations

Cross-references between data sources are generated by keyword matching and may produce false positives or miss relevant connections. IRS 990 data lags 12–18 months. SEC 8-K classifications are based on item codes and filing descriptions. Trial sponsorship matching is approximate. This report covers curated lists of organizations and companies — not the complete universe of CRC funding.

Disclaimer

Funding data sourced from IRS Form 990 filings via ProPublica Nonprofit Explorer and SEC EDGAR 8-K filings. Clinical trial data from ClinicalTrials.gov. Drug data from FDA Drug@FDA. Biomarker data from PubMed and society feeds. All cross-references are generated by deterministic keyword matching. This report is made available under a free-use license for patient advocacy organizations, oncology practices, and individual patients. You may share or distribute it freely.
