Activity Status: National ILI activity is **LOW** at 1.4% — below the national baseline of 3.1%. Flu season activity is winding down. ILI captures outpatient visits for fever + cough/sore throat — not laboratory-confirmed influenza. RSV, COVID, and other respiratory pathogens may contribute to the reported percentage.

Virologic Surveillance

Laboratory-confirmed influenza from NREVSS clinical labs | National only | Source: CDC FluView Clinical

ⓘ Unlike ILI (syndromic), these figures reflect laboratory-confirmed influenza specimens. Confirms whether elevated ILI is driven by actual influenza or other respiratory pathogens.

Signal	Latest	WoW	10Y %ile	Note
% Specimens Positive (any flu)	0.9%	-0.5%	27th	Lab-confirmed
% Positive — Influenza A	0.3%	-0.1%	16th	Flu A
% Positive — Influenza B	0.6%	-0.4%	56th	Flu B

ILI Activity by HHS Region

Weighted ILI % vs 2025-26 regional baselines | Percentiles vs trailing 10-year history | Source: ILINet

ⓘ Regions within 0.2 percentage points of their baseline are statistically near baseline — small margins may reflect normal weekly variation rather than meaningful activity differences. Covers outpatient visits only; does not include emergency department or hospitalization data.

Region	wILI%	Baseline	vs Base	Trend	10Y %ile	Status	Period
National	1.4%	3.1%	-1.71%	↓	30th	LOW	2026-06-06
Region 1 — New England	0.9%	2.2%	-1.33%	↓	32nd	LOW	2026-06-06
Region 2 — NY/NJ	2.0%	4.5%	-2.47%	↓	33rd	LOW	2026-06-06
Region 3 — Mid-Atlantic	1.1%	2.7%	-1.58%	↓	31st	LOW	2026-06-06
Region 4 — Southeast	1.4%	2.8%	-1.38%	↓	26th	LOW	2026-06-06

Region	wILI%	Baseline	vs Base	Trend	10Y %ile	Status	Period

Season Comparison

Same week: current vs prior 3 seasons

Season	wILI%	Baseline	vs Base	Status
2025-...	1.4%	3.1%	-1.71%	LOW
2024-25	1.6%	3.1%	-1.50%	LOW
2023-24	1.7%	3.1%	-1.44%	LOW
2022-23	1.6%	3.1%	-1.52%	LOW

Week Ending	wILI%	vs Baseline	Status
2026-01-24	4.7%	+1.63%	ELEVATED

Data Sources: Influenza-like illness (ILI) surveillance data sourced from the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet) via the Delphi CMU Epidata API (api.delphi.cmu.edu/epidata/fluview) and stored in the Thor Storehouse (source: 'fluview'). ILI is defined as fever ($\geq 100^{\circ}\text{F}$) plus cough and/or sore throat. Weighted ILI (wILI) is state-population-weighted to produce a representative regional and national estimate. Data is updated weekly by CDC on Fridays after 11 AM ET. All data are preliminary and subject to revision. Baselines for the 2025-26 season published by CDC FluView. Percentiles computed against trailing 10-year weekly history.

Disclaimer: All numerical values originate from deterministic, timestamped sources (CDC FluView / ILINet). No AI-generated content. ILI is a syndromic definition — it captures visits for flu-like symptoms regardless of laboratory confirmation and may include other respiratory pathogens. This report is for informational purposes only and does not constitute medical advice. Data subject to CDC revision.
